| <b>HOW TO INTERPRET ILT Doc:</b>  |  |  |  |
| Inventory health projection is based on:  |  |  |  |
| Quarterly forecast is supported by supply   |  |  |  |
| Upside (safety stock) is available  |  |  |  |
| Based on the expected demand, inventory health is bucketed below:   |  |  |  |
| <b>Healthy - forecast is covered, + safety stock (Green)</b>  |  |  |  |
| <b>Forecast is covered, minimal upside available (Yellow)</b>   |  |  |  |
| <b>Supply is available, but is less than forecast. Product could be immediately available, but some potential extended lead times (Red)</b>   |  |  |  |
|   |  |  |  |
| <b>Lead Time - If an order is booked today, this is the estimated days to ship (Calendar Days)</b>  |  |  |  |
|   |  |  |  |
| <b>Once an oppty is booked, "Planned Shipped Date" in SFDC will be populated, indicating when your order will ship - updated daily</b>  |  |  |  |
|   |  |  |  |
| <b>FAQ</b>  |  |  |  |
| Some SKUs show GREEN, but the LT is more than 1 day....doesn't GREEN mean readily available?  |  |  |  |
| Colors indicate projected inventory at the end of the month - we could be momentarily short today, but green by the end of the month. Use LTs for the most accurate short-term expectations |  |  |  |
|   |  |  |  |
| Some SKUs show RED, but the LT is 1 day....doesn't RED mean we're out of stock?   |  |  |  |
| We could have shortages projected by the end of the month, but TODAY we have inventory that we can ship. Use LTs for the most accurate short-term expectations                              |  |  |  |
